

Process Interlocking

ISI Touch screen

ISI Touch screen stores all relevant information about your interlocks in a central place. It makes this information easily accessible to every operator, at any location.

ISI Touch screen can be mounted as a standalone feature or integrated in a NL key cabinet in the control room. It is also easily integrated in your control panel.

The ISI Touch Screen depicts all your interlocking start keys. One touch on the screen gives you detailed information about the respective system:

- System name
- Operating sequence logic
- P&ID
- Location

Company specific content can be added. But it has more. Buttons with Netherlocks contact information, general interlocking information and a training button with instructions. Connect a printer and you can take a printout of the sequence with you.

Clear communication adds to a safe working environment. This innovative addition to our product range helps you to make the lock information easily available. This increases the safety at your plant.

Features

- All information about your interlocks in one place
- Available where you need it
- Accessible to all operators
- User friendly
- Customized to your needs
- No license cost
- Easy to update in case more locks are added
