

Process Interlocking

Master Key

The master key is fully stainless steel AISI 316 and can be used on all Nether-locks but a master key can also be supplied per area, process, division, etc...

A master key should always be kept under supervision and A master key should be stored properly. *e.g. Master Key Cabinet*

Master Key Cabinet

To store the master key we have a red lockable key cabinet available.

The cabinet is lockable and only the responsible people have access to this cabinet.

In case of emergencies the glass can be broken and the key released!

It is preferable to hang the cabinet in or next to the control room. The red colour makes it eye-catching.

Features

- Lockable door
- Breakable glass
- Including hammer to break glass
- Red colour for easy notice
- Powder coated steel
